Prices quoted are from color prints only. Wallet size or larger prints are recommended.

DIGITAL CAMERA FILES FOR PHOTO PUZZLES

Send only images taken at the highest resolution your camera can provide.

More pixels will create sharper photo quality & print reproducing. JPEG files are recommended. After a photo is taken you will lose image quality if you try to resize, or make changes in size or content.

8" x 10" puzzles 2.9 - 3.9 megapixel cameras
 11" x 14" puzzles 4.5 - 5.5 megapixel cameras
 15" x 20" puzzles 5.5 & up megapixel cameras

SCANS (FLATBED) FOR PHOTO PUZZLES

The general standard for high quality print production is that you'll need a final image resolution of 300 DPI. NOTE, many files scanned at or near the puzzle size ordered will print very well in the 200 & up DPI range. Remember as you scan a small print the DPI will drop when the image is enlarged.

Example, scan a typical 4" x 6" print at 300 DPI would create an 8" x 13" image with only 150 DPI. Scan the image at 600 & you'll have a higher DPI resolution of 300 for the 8" x 12" photo. Some software programs allow you to enter the print resolution & size for your scan.
